Smart Bindings - Model-View-Presenter pattern implementation. It is very useful to split data model and presentational view one from each other to make your solution modular, so programmers and designers can work on same things simultaneously. Plus this will allow you to build complex graphical user interfaces without coding at all.

Package content

Helpers

- Values Bindings (Bool, Color, Float, Integer, Sound, Sprite, String)
- Method Bindings (Bool, Float, Integer, Object, String, Void)
- Root Binding
- Collection Binding

Managers

- Bindings Manager
